Windicator Bike Flag assembly instructions

Your Windicator Bike Flag comes in three sections and includes a 9.5mm to 6mm adapter that will enable it to fit in most bike flag pole brackets.

Step 1

Extend the Horizontal Body Strut into the Rotating Hub. It is shock-corded for your convenience and security.

Step 2

Stick the Head onto the Vertical Mast (See Diagram 2).

PLEASE NOTE: Some Windicators have longer heads and require you to connect a Neck Rod into a ferrule at the Vertical Mast. (See Diagram 3 for Long Neck versions)

Step 3

Attach head to body using Velcro Flaps (See Diagram 2 or 3)

Step 4

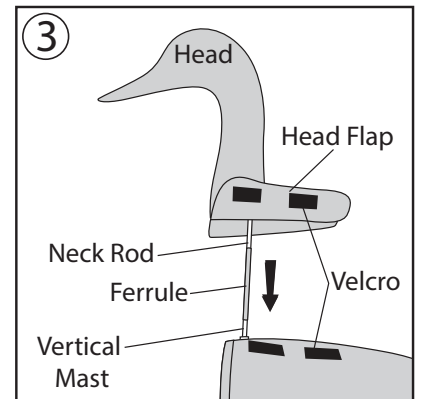

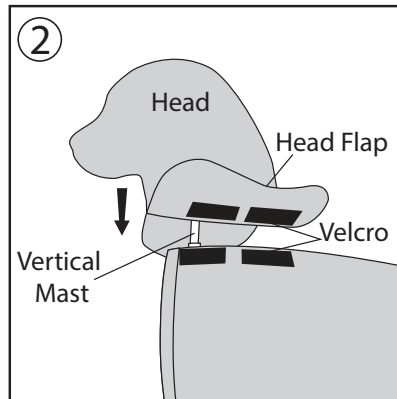

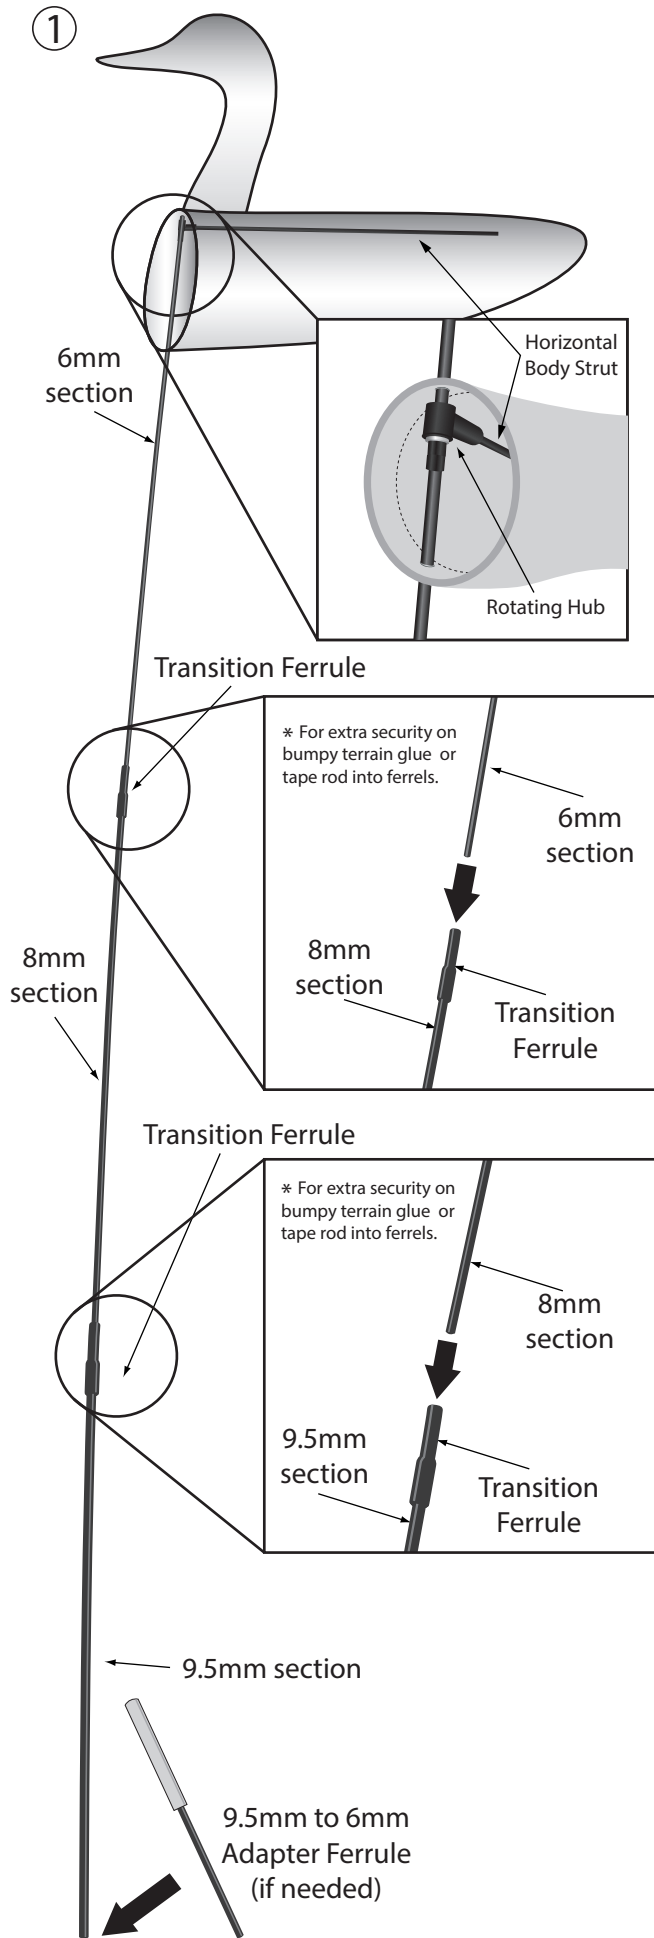

To assemble your pole, simply join the three sections together by pushing the sections firmly into the transition ferrules. You will see that the bottom section starts at a heavy 9.5mm in diameter, then transitions to 8mm in diameter and finally ends at 6mm in diameter. This exclusive engineering from Premier allows for a very stiff bike flag pole without unnecessary weight.

Step 5

Important note: Although the transition ferrules have a fairly tight "friction fit", for extra precaution, we recommend gluing the joints together to avoid sections from separating over bumpy terrain. Any style CA or "Super Glue" works fine for permanently securing the transition ferrules. Another method that works but is less permanent, is to simply wrapping a few layers of electrical tape or duct tape around the transition ferrule joint areas.

Step 6

Your Windicator Bike Flag also comes with a 6mm Adapter. This allows your pole to fit most all typical bike flag mounting brackets that are normally sized at 6mm. Simply slide the stainless steel Adapter Ferrule onto the bottom of your Extra Stiff Pole and stick the other end into your existing mounting bracket.

For heads with long necks, use this diagram
